Hypothesis 3: Baseline ERP measures of threat processing will predict ABMT effects on threat bias, state anxiety, and stress reactivity. 
Each of the post-training measurement steps was conducted separately as the dependent variable with the following variables entered in separate steps: 1) the corresponding pre-training measure; 2) Gender; 3) Training Group; 4) ERP (ABMT, N2 or PT). Significant interactions were followed up with using PROCESS for SPSS [17].
